BREAKING NEWS
**20 Fat-Melting
Laser**
Has the day finally come when
you can shed fat without a diet,
exercise, or surgery? Possibly.
Engineering FDA clearance this
summer in Zircote, a non-invasive,
pain-free laser that claims to
stimulate the release of fat from
cells, which is then absorbed by
the lymphatic system and naturally
excreted from the body. A recent
clinical study has shown an average
reduction of 3.83 inches from the
waist, hips, and thighs after two
weeks of six 45-minute laser
sessions. "This goes way beyond
plastic surgery," says Frank Ryan,
a board-certified plastic surgeon in
Beverly Hills who has been using
the laser. "It's a game-changer that
revolutionizes the field." Julie
Caldwell, 34, who has had the
treatment, "In two weeks, I lost
almost 1.5 inches on each thigh.
My clothes fit better now." The
downside? Probably means you have
long the results but it may require
that long-term side effects. Prices
will average \$300 per session. **A**
